

**Modified MIS Bottom Fill Adapter
for
Priming Easy-refill Cartridges
&
Pulling Ink from or Refilling Epson
Large Format 7600 Ultrachrome Carts**

These bottom-fill adapters (MIS-BADP) are available from MIS for \$0.50 at http://www.inksupply.com/accessory.cfm?action=find&the_cat=1

Syringes that are needed for using these are also on this MIS web page.

The end can be cut to 7 mm with a sharp scissors. This will allow the adapter to seal much better in the Epson poppet valves.

I recommend this modified adapter for removing ink from or refilling Epson large format 7600 type carts also. I think they work better than the MIS modifications (a tube on the end). 7600 carts are a convenient source of Epson ink for desktop printers and can also be rinsed out for re-using for non-OEM inks, such as the carbon inks I recommend for B&W. Note that the chip re-setters are also on the MIS page, above.
